Web Application Development &

AFWEBCO's web application development practice addresses a wide range of business needs. We've worked with many afghan companies and national and international organization to build customized website modules and even complete stand-alone web-based applications.

Characteristics of Our Web Applications

Whether it's a web content management system or a web-based data interface with thousands of users, our web applications demonstrate all the hallmarks of competence.

- ❖ Our web applications follow a true n-tier design methodology, thus allowing for growth and expansion.
- ❖ Our solutions are highly innovative and effective
- ❖ Using our web solutions is easy, efficient and intuitive... even for not-so-technical users.

Our Services

Web Hosting

A web hosting service is a type of Internet hosting service that allows individuals and organizations to make their website accessible via the World Wide Web. Web hosts are companies that provide space on a server owned or leased for use by clients, as well as providing Internet connectivity, typically in a data center.

Domain

When you have a site visitor, they use your domain name to view your website. As simple as it seems, there is a process that occurs from the time that the site visitor types in your domain and presses enter. When a site visitor enters your domain name into a browser, the domain is then translated into your server IP address.

Mobile Application

As new technology continues to develop, the need for a website that functions on mobile devices is becoming increasingly important. All WordPress websites that we create are built to be mobile-friendly on all devices, such as your smartphone, iPhone, iPad, and Android. We also offer custom mobile-friendly web design.

Our Services

Web Design

Web design encompasses many different skills and disciplines in the production and maintenance of websites. The different areas of web design include web graphic design; interface design; authoring, including standardised code and proprietary software; user experience design; and search engine optimization.

SMS Gateway

These days thanks to the internet, even the bigger companies are trying to reach as many people as they can to canvas their products. This they do by sending bulk text alerts to a plethora of mobile phones. They avail of a database service for this purpose thereby targeting thousands of customers in one shot

Vps Server

VPS Hosting Plans. VPS Hosting is similar to owning a Condo. While you still share things on the property, you are ultimately responsible for maintaining your own property and repairs inside the condo. There is also significantly less residents per building and assigned parking. On a Virtual Private Server.

Hosting Plans
